

# ECOLOGY CONTROLS

## M-BINDER

U.S. Patent #3696559

### TYPICAL SPECIFICATIONS:

Ecology Controls M-Binder has been written into many specifications and used on thousands of acres including Federal, State, County, City and numerous private projects. A sample Specification may read as follows:

Wood Fiber shall be derived from virgin wood chips dyed green in 50 lb. bales. Apply at the rate of 1,000 to 2,000 lbs. per acre.

Soil Stabilizer shall be **Ecology Controls M-Binder** applied at the rate of 60 to 140 lbs. per acre. Add slowly to avoid lumping.

Fertilizer shall be as specified by architect, agency, or agronomist knowledgeable of existing soil conditions.

Seed shall be of commercial quality and of the best standards of purity and germination available and shall be free of noxious weeds.

Mixing: The slurry shall be prepared by mixing mulch, seed, fertilizer, Ecology Controls M-Binder and water in the mixer in the proper proportions specified. The material shall be loaded into the mixer and mixed in such sequence as to provide a thoroughly mixed, homogeneous slurry. The slurry shall have the proper consistency to adhere to the earth slopes without lumping or running.
